

QS6500BT

AutoUpdate Caution

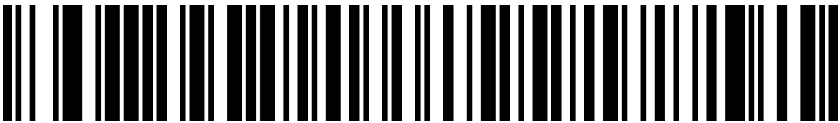

CAUTION

The first time a Scanner links to any Cradle (Base Station), the Cradle will attempt to overwrite the Scanner's application and configuration software if it is different from what is stored in the Cradle's non-volatile memory. To prevent this from happening, the Auto-update option in the Scanner must be disabled prior to linking to a Cradle.

For more information about the QS6500BT Auto Update feature and its options, refer to "Bluetooth Features" in the PSC QuickScan® QS6500/ QS6500BT Product Reference Guide.

To enable or disable the Auto-update option, scan the appropriate bar code below. The Factory Default Condition for this option is Auto-update enabled.

Auto Update Enabled:

Auto Update Disabled:
